Renew your pivots under one platform

It is a controller installed in the final part of the pivot which includes a GPS which takes control of the operations carried out by the machine.

It allows using all the functionalities of the central panel that already exist in the pivot, whether electronic or mechanical and offers us the possibility thanks to its connectivity of control them remotely and view them all.

Economical and easy to install solution.

It can be placed on any brand of pivot having all its machines under one application.
